

M2M - Wireless Point-of-Sale (POS)

Wireless POS for fixed locations such as supermarkets, service stations, convenience stores and retail outlets provides a significant reduction in ongoing running costs of your EFTPOS terminal due to the low cost tariffs provided by the Wireless Network Operators Worldwide. With no cables attached it also allows convenient relocation of the terminal in the case of a retail store.

If you have any questions or need help on your Wireless POS Project, please contact us: [M2M Info](#)
